EXPERIMENT

Title

MAGIC STRING

Description

Eva has a string S containing lowercase English letters. She wants to transform this string into a Magic String, where all the characters in the string are the same. To do so, she can replace any letter in the string with another letter present in that string.

Your task is to help Eva find and return an integer value, representing the minimum number of steps required to form a Magic String. Return 0, if S is already a Magic String.

Input Specification:

input1: A string S, containing lowercase English letters.

3BR23EE10A3BR23EE10A3BR23EE10A3BR

38R23EE10A3BR23EE10A3BR23EE10A5

Output Specification:

Return an integer value, representing the minimum number of steps required to form a Magic String. Return 0, if S is already a Magic String.

38R23EL10A3BR23E

Sample Input:

aaabbbccdddd

Sample Output:

8

Source Code:

```
from collections import Counter

def min_steps_to_magic_string(S):
    if not S:
        return 0

    frequency = Counter(S)
    max_freq = max(frequency.values())
    return len(S) - max_freq

# Example usage
if __name__ == "__main__":
    import sys

S = sys.stdin.readline().strip()
    result = min_steps_to_magic_string(S)
    print(result)
```
